2.2 Neural Networks

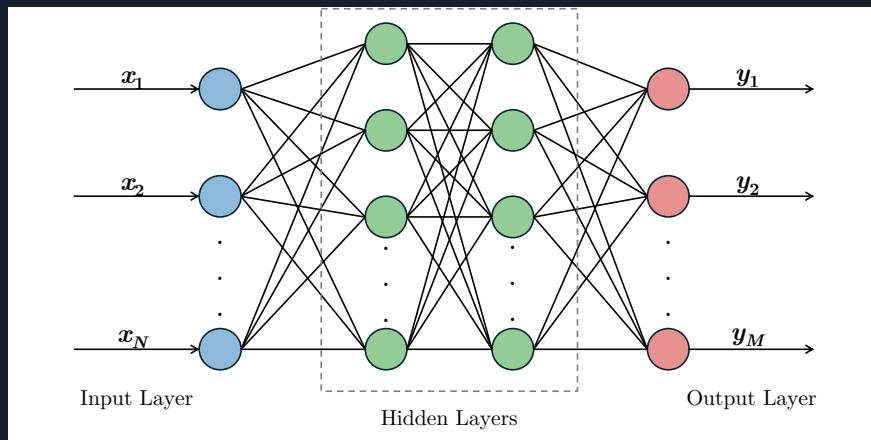

FIG 2.1: Schematic view of a neural network where each circle represents a single neuron. An input signal $\mathbf{X} = \{\mathbf{x}_i\}_{i=0}^N$ enters the model in the input layer, proceeds through the hidden layers, and exits from the output layer. This process produces an output $\mathbf{Y} = \{\mathbf{y}_i\}_{i=0}^M$, which can be interpreted as a prediction based on the input data.

Loss function, such as root-mean-squared error (RMSE).
